

AI Audit Report

Declaration

I use AI tools for the following tasks.

AI assisted with checklist drafting, source-oriented test analysis, report organization, template preparation, and editorial review. AI-generated material is not treated as proof of participant sessions, browser/device execution, recordings, Git commits, GitHub issues, or uploaded videos.

Audit method

Each interaction record identifies the tool, date and time, prompt, relevant output, human review, and affected artifact. Exact timestamps and verbatim prompts must be copied from the original AI conversation history; fields not yet verified remain explicitly unfilled.

Interaction log

AI-01 — GUI checklist design

Field	Record
Tool	OpenAI Codex
Date and time	To be copied from the original interaction history
Prompt	To be copied verbatim from the original interaction history
AI output	Proposed GUI checks for the selected EShop scope across IA-01 to IA-04.
Human review	Review every item for relevance, duplication, expected behavior, and execution evidence.
Affected artifacts	checklist/gui_checklist.csv, checklist/gui_checklist.xlsx

AI-02 — Defect analysis and reporting

Field	Record
Tool	OpenAI Codex
Date and time	To be copied from the original interaction history
Prompt	To be copied verbatim from the original interaction history
AI output	Candidate defect descriptions and traceability between failed checks and defect records.
Human review	Verify each issue through actual execution; attach authentic screenshots and GitHub issue evidence.
Affected artifacts	bugs/bug_report.md, bugs/evidence_images/, bugs/github_issues_screenshots/

AI-03 — Usability evaluation preparation

Field	Record
Tool	OpenAI Codex

Field	Record
Date and time	To be copied from the original interaction history
Prompt	To be copied verbatim from the original interaction history
AI output	Drafted the goal-oriented task scenario, response forms, observation structure, and SUS analysis framework.
Human review	Conduct one pilot and seven real sessions; enter only consented, observed, and verifiable data.
Affected artifacts	usability/

AI-04 — Cross-platform protocol

Field	Record
Tool	OpenAI Codex
Date and time	To be copied from the original interaction history
Prompt	To be copied verbatim from the original interaction history
AI output	Structured a three-environment execution matrix and evidence requirements.
Human review	Execute all environments and verify browser, operating-system, device, URL, watermark, and observed results.
Affected artifacts	cross_platform/

AI-05 — Report and Agent Skill preparation

Field	Record
Tool	OpenAI Codex
Date and time	To be copied from the original interaction history
Prompt	To be copied verbatim from the original interaction history
AI output	Revised the main report, AI Critique, audit structure, submission index, and reusable skill documentation.
Human review	Confirm factual accuracy, replace outstanding empirical fields, review generated documents, and verify the demonstration video.
Affected artifacts	README.md, main_report.*, ai_reports/, agent_skills/

Human-review controls

- No participant identity, quotation, rating, duration, or task result may be generated by AI.
- No cross-platform result may be reported without an authentic run and screenshot.
- Static source inspection may create a test hypothesis but does not establish a user-visible defect.
- Every final status, defect, score, link, and summary count must be reconciled with its source evidence.

Student attestation

To be signed after all interaction records and evidence have been reviewed for accuracy.
